EDUCATION

University of Windsor

Bachelor of Science (Honours) - BS, Computer Science with Software Engineering Co-op

Sep 2023 – Aug 2027

Windsor, ON

EXPERIENCE

Software Engineer Co-op

Stellantis

Jan 2026 – Present

Windsor, ON (Hybrid)

- Engineered an internal EIS platform for Stellantis' OTA team using **React**, **TypeScript**, **FastAPI**, and **SQLite**, unifying 3D circuit configuration, simulation, hardware control, and reducing board iteration costs by **\$1050**
- Integrated hardware and simulation pipelines with **Arduino/PlatformIO**, **pyserial**, **FFT-based** analysis, and **Python** solvers to simulate circuitry, execute physical runs, and cut validation turnaround time by **56%**
- Developed a **Python** clustering and record-linkage pipeline that auto-tuned time-gap thresholds, handled torque sequences, and assigned BVINs, eliminating human intervention by **99%** and accelerating battery investigations

Undergraduate Teaching Assistant

University of Windsor

Sep 2025 – Present

Windsor, ON (Hybrid)

- Led a weekly Software Development lab for **37 students**, teaching **Java** and **OOP** through live coding, debugging demos, and guided practice with classes, inheritance, interfaces, and collections

Machine Learning Engineer Co-op

Stellantis

Apr 2025 – Aug 2025

Windsor, ON (On-site)

- Built a battery fault detection pipeline in **Python** using **pandas**, **NumPy**, **scikit-learn**, and **XGBoost** to extract BMS features and improve precision at target recall by **21%** on tested cells and packs
- Designed **SoC-aware calibration** and validation-driven thresholds using **Python** and precision-recall analysis, reducing false positive alerts by **32%** while preserving recall and preventing evaluation leakage
- Streamlined experiment tracking and engineer-ready reporting in **Python**, reducing triage time per log by **60%** across testing/validation workflows

Software Engineer Intern

Glendor, Inc

Sep 2024 – Dec 2024

Draper, UT (Remote)

- Created a medical de-identification pipeline in **Python** using **OpenCV-based** blur and detection algorithms to process **2000+** medical images, achieving **92%** accuracy in identifying sensitive regions while preserving privacy
- Automated output generation and asset organization with **Python** scripts, reducing manual intervention by **96%** through metadata tagging, file renaming, and structured folder storage

PROJECTS

TradeCore | *Next.js, TypeScript, FastAPI, PostgreSQL, Redis, Celery, scikit-learn, Docker, Git*

- Architected a full-stack **crypto strategy research and paper-trading platform** that ingests historical market data, executes user-scoped backtests, and surfaces trade-level analytics, equity curves, and benchmark comparisons
- Built asynchronous market-data, validation, and **ML-regime** workflows with **Celery**, **Redis**, and **WebSockets**, enabling walk-forward analysis, real-time job tracking, and strategy evaluation across backtesting pipelines

ReflectAI | *TypeScript, React Native, Expo, FastAPI, PostgreSQL, Redis, Celery, Docker, Git*

- Launched an **AI journaling mobile app** that delivers daily reflection prompts, supports typed and voice-based entries, and generates weekly insight summaries with recurring themes, patterns, and progress tracking
- Designed reminder, streak, and entry-history flows to support consistent journaling habits and long-term reflection

GameFlow | *Python, R, XGBoost, DuckDB, Parquet, Streamlit, Quarto, Git*

- Created an **NBA analytics platform** that models in-game win probability from play-by-play data, ranks the biggest swing plays by win-probability, and compares calibrated **Python** and **R** baseline models through **Quarto**

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, C, C++ (CUDA), R, Golang, HTML, CSS, PHP, MATLAB
Frameworks/Libraries: React, Next.js, FastAPI, Node.js, React Native, Expo, Tailwind CSS, Socket.IO, scikit-learn, XGBoost, TensorFlow, PyTorch, pandas, NumPy, Matplotlib, OpenCV, SQLAlchemy
Tools/Platforms: Git, GitHub, Docker, Redis, Celery, Jupyter, Vercel, Alembic, PyTest, Selenium, OpenAPI, PlatformIO, Power BI, Tableau
